EO Token Whitepaper v1.0

One Future, Forever Connected

English Edition · Public Release

Eternal One

English Edition Notice

This English edition is an English-language rendering of EO Token Whitepaper v1.0 Public Release. It preserves the business structure, utility model, Tokenomics, Roadmap and risk disclosures of the Korean public release. If a material inconsistency is identified before a separately announced English legal review, the Korean Public Release should be consulted as the source text.

Important Notice

EO Token is designed as a utility token for services within the EO ecosystem and does not promise investment returns, price appreciation, dividends, principal protection or any specific financial return.

Business plans and schedules may change, be delayed or be discontinued depending on technology development, market conditions, partnerships, applicable law, regulation, sanctions, government approvals and licensing.

01

Executive Summary

PUBLIC RELEASE · ENGLISH EDITION

EO Token begins with the philosophy of **Eternal One** - the idea of becoming one enduring connection. EO's long-term vision is to connect people with people, content with markets, and today's services with future opportunities for exchange within a single connected digital ecosystem.

This vision is not intended to remain an abstract slogan. EO Token is designed around practical service utilities introduced in stages, including payments in EO Shopping Mall, Experience & Access Utility for concerts, broadcasts and events, and selected EO-exclusive reports and data products.

EO Token takes the Korean Peninsula and the media and data capabilities of Tongil TV as an important starting point, but it is not intended to be limited to a particular geography or political agenda. The goal is to validate practical utility in the Korean market first, then progressively expand into a global commerce, content and service ecosystem after comparing market potential and regulatory conditions.

EO Token Positioning
EO Token is a Solana-based utility token designed to connect people, markets, content and experiences within one digital ecosystem.

Three Utility Pillars Centered on Real-World Use

- **Commerce Utility** - Full EO payment for the total order amount, including products and shipping, in EO Shopping Mall.
- **Experience & Access Utility** - Special concert seating, broadcast audience access, event applications and limited experiences.
- **Content & Intelligence Utility** - Purchase of selected EO-exclusive reports, data packs and early-access analytical materials.

Separation of Business and Token Roles

EO Token does not replace the underlying businesses. Tongil TV is positioned around Media & Data, EO Global around commerce, events and commercial services, and the planned EO Foundation - targeted for establishment before TGE - as an independent operating entity responsible for the token ecosystem, Treasury and Tokenomics.

02

Problem & Opportunity

PUBLIC RELEASE · ENGLISH EDITION

The problems EO Token seeks to address can be organized into three layers. First, many digital-asset projects still lack repeatable real-world utility relative to trading and holding. Second, content, shopping, event and data services are often separated, fragmenting both user experience and business data. Third, media, regional and industrial information, education, commerce, tourism and long-term exchange services related to the Korean Peninsula are also fragmented.

1) Lack of Real-World Utility

EO places actual service use ahead of token trading itself. The objective is to answer the question, “Why should a user use EO?” inside real services such as shopping payments, event participation and information-product purchases.

2) Fragmented Content and Services

When media, commerce, events and data services are separated, user experience and business data become fragmented as well. The EO ecosystem aims to connect Media & Data, Commerce, Experience and Intelligence through a unified Utility Layer.

3) Fragmented Korean Peninsula Information and Services

Information related to North Korea, unification and the Korean Peninsula is dispersed across news, policy materials, research, video and separate online channels. Tongil TV's North Korea NOW is intended to transform this material from one-off news into accumulated content and data assets that can later support education, B2B services, tourism and commerce.

Opportunity: One Connected Ecosystem

EO's opportunity is not simply to list multiple businesses in parallel. The objective is to accumulate content as structured data, use that data to build trust and insight, build commerce, experience and information services on top of it, and use EO Token as the utility layer connecting those services.

Differentiation Framework

Rather than directly naming competing projects, EO Token explains its design direction by comparing structural characteristics across token categories.

Category	EO Token

	Typical Payment Token	Community Token	Content Token	
Primary purpose	Payment	Participation / rewards	Content access	Connect commerce, experience and intelligence
Commerce linkage	Partial	Limited	Limited	EO Shopping Mall
Events / experiences	Limited	Some	Some	Special seating, audience access, applications
Content / data	Low	Low	High	Information products based on Tongil TV / North Korea NOW
Information products	Limited	Limited	Some	EO-exclusive reports and data packs
Expansion structure	Single-function	Community-centered	Content-centered	Commerce + Experience + Intelligence

Three Competitive Advantages
Real Utility · Media & Data Foundation · Integrated Utility Ecosystem

03

Vision & Brand Philosophy

PUBLIC RELEASE · ENGLISH EDITION

The “EO” in EO Token stands for **Eternal One**. Beyond being a token name, it represents the brand philosophy of continuously connecting people with people, communities with markets, online with offline, and today's services with future opportunities for exchange across boundaries.

Main Slogan

> One Future, Forever Connected

Brand Positioning

EO Token starts from the Korean Peninsula but aims toward a connected world. The Korean Peninsula and Tongil TV's media and data capabilities are important starting points, while EO itself is intended to grow into a global utility brand connecting people and markets, content and experiences, commerce and digital services.

Practicality over Political Slogans

EO Token is not designed around a particular political slogan or ideology. It is intended as a practical digital ecosystem that connects people, content, markets, commerce and experiences through actual services.

One People - Limited Brand Statement

“One People. One Network. One Future.” is used only in the brand-philosophy context to explain EO's starting philosophy. The primary external message remains “One Future, Forever Connected.”

04

Ecosystem Operating Structure

PUBLIC RELEASE · ENGLISH EDITION

Operating Entity	Primary Role	Whitepaper Positioning
Tongil TV	Broadcasting, North Korea NOW, content IP, data, community, culture and education	Media & Data
EO Global	EO Shopping Mall, events, commercial services and global business	Commerce & Services
EO Foundation	EO Token, Treasury, Tokenomics, Governance and ecosystem policy	Token Ecosystem Steward

The three organizations are not presented as one integrated company. Each has a distinct role and responsibility while cooperating within the EO ecosystem.

EO Foundation

- Targeted for establishment as an overseas nonprofit-type EO Foundation before TGE.
- Jurisdiction to be selected through a combined assessment of regulatory clarity, international credibility, exchange and financial-institution compatibility, formation and operating cost, and tax efficiency.
- Initial board to be a small structure centered on founders and core operators.
- Legal, finance, blockchain, tax and business advisory experts may be added as needed.
- Foundation-centered governance is intended to remain the long-term model; holding EO itself does not confer management or voting rights.

Target Users

- **General consumers** - Shopping Mall purchases and Event / Experience Utility.
- **Tongil TV viewers and community** - Content, events and future membership services.
- **Companies and institutions** - North Korea NOW reports, data services and B2B research / consulting.

05

Media & Data Engine — North Korea NOW

PUBLIC RELEASE · ENGLISH EDITION

STATUS
PLANNED · Selected content concepts and preparatory work are already underway.

North Korea NOW is defined as Tongil TV's Media & Data Engine. It is intended to accumulate video and structured data on industry and economy, agriculture and fisheries, tourism resources, food and culture, daily life, cities and regions, resources and industrial infrastructure in North Korea, and use that information as a foundation for education, B2B intelligence, commerce and tourism across the EO ecosystem.

Data Taxonomy

Area	Data to Accumulate	Potential Use
Industry & Economy	Industrial structure, companies and factories, special economic zones, market trends	B2B reports and market analysis
Agriculture & Fisheries	Production, products, aquaculture, storage and distribution	Content and supply-chain data
Tourism	Tourism resources, cultural heritage, regional stories	Tourism content and Peace Tourism Belt
Daily Life & Culture	Food, daily life, culture and education	Public content and education
Cities & Regions	Regional overview, transportation, infrastructure and resources	North Korea 100 Regions Project

North Korea 100 Regions Project

The “North Korea 100 Regions Project” is a long-term content and data initiative that organizes major cities and regions using a consistent classification system, enabling comparison across regions and tracking changes over time.

Regional Data Structure

- Regional overview and basic information
- Industrial and economic structure
- Major products and resources

- Agriculture and fisheries
- Tourism and cultural resources
- Transportation, logistics and core infrastructure
- Daily life and regional characteristics
- Potential future areas for exchange and cooperation

Content-to-Data Flow

RESEARCH → VERIFY → PRODUCE → STRUCTURE → PUBLISH → UPDATE
Public sources, institutional materials, expert interviews and lawful reporting are collected; facts, estimates and outlooks are distinguished; content production and database updates are carried out together.

Open Content & Premium Intelligence

Basic content and key regional information are made public to broaden access and impact. In-depth industry analysis, regional economy and infrastructure reports, and customized analysis for specific sectors or regions may be offered as premium or B2B intelligence services for companies and institutions.

06

EO Shopping Mall — Commerce Layer

PUBLIC RELEASE · ENGLISH EDITION

STATUS
PLANNED · Business and service structure under detailed development.

EO Shopping Mall is the commerce platform intended to implement EO Token's core Commerce Utility. The initial operating model centers on direct sales, with EO Global planning, sourcing and selling products directly. As operating experience and the user base expand, the model may develop into a Marketplace where external brands and sellers participate.

Product Strategy

- **Initial:** Tongil TV / EO merchandise, content-linked products, general consumer goods and partner-brand products.
- **Expansion:** Lawfully sourced Korean Peninsula traditional foods, cultural products and regionally themed products.
- **Long-term conditional:** North Korea-related goods may be reviewed only where applicable law, sanctions, customs, inspection and country-of-origin requirements can be satisfied.

Payment Principle

A single order is paid either 100% in EO Token or 100% in fiat currency. Mixed EO-and-fiat payment within one order is not supported.

When EO payment is selected, the total order amount - including product price, shipping, and taxes that can be determined at the domestic point of payment - is converted into EO Token. Overseas taxes, duties and customs charges may vary by country and product.

Commerce Expansion Model

Direct Sales → Marketplace

Stage	Operating Model	EO Application
Initial	EO Global direct sales	Full EO payment supported for most general products, with selected exclusions possible
Expansion	Direct sales + external sellers	Sellers may choose whether to support EO payment

Settlement	EO-enabled sellers	Settlement in EO or fiat may be selectable under separate Marketplace policy

EO Payment Pricing

- EO payment pricing references market prices from a designated reference exchange.
- The reference exchange may be designated or changed based on liquidity, price stability and service suitability.
- Detailed price-calculation methodology and quote-validity periods are defined separately in Service Terms and the EO Technical Paper.
- EO payment may be selectively restricted during extreme market moves, exchange outages or price-data errors.

Refund Principle

For ordinary goods paid in EO, refunds are generally based on the actual amount of EO paid by the user. Detailed refund periods, management of assets pending refund and settlement procedures are defined separately in EO Shopping Mall Service Terms and operating policies.

07

Experience & Access Utility

PUBLIC RELEASE · ENGLISH EDITION

One of EO Token's differentiated initial utilities is special access to performances, broadcasts and events. Separate from Shopping Mall payments, EO Token is intended to connect users with limited experiences and participation opportunities that may be difficult to obtain through ordinary payment alone.

Core Models

Model	Description
Basic application	Users meeting event-specific EO holding conditions may receive a basic application opportunity.
Additional applications	EO Token may be used for additional applications. EO used for an application is not returned regardless of selection outcome.
EO special seating	Depending on the event, full EO payment, EO application or another suitable model may be used.
Premium experience	Artist-linked special viewing environments, broadcast audience access and limited programs.

EO does not currently adopt a fixed Basic / Silver / Gold tier system. Holding conditions, application amounts and EO-use requirements are designed separately for each concert, broadcast or event.

Event Token Flow

EO Token used for paid applications may, depending on operating policy, be transferred to Treasury, recirculated through the ecosystem or partially burned. Detailed allocation criteria and any recurring burn program would be introduced only after sufficient real-use data has accumulated and after prior notice.

EO Express — Global Experience IP Platform

EO Express is a composite Experience IP platform concept intended to connect the movement, on-site documentation, live distribution, documentary production, publishing and tourism surrounding an event into a long-term IP value chain rather than ending with a one-off performance. Its core vision is **“One Event → One Journey → One Global IP.”** Specific artists, dates, routes, broadcasters, OTT platforms or contracts are not presented as confirmed until official agreements have been verified.

One Event → One Journey → One Global IP

The focus of EO Express is not only the performance itself, but the conversion of the entire surrounding process into content, experience and tourism IP. The conceptual model progressively links an event, curated

travel, field documentation, Live / OTT, documentary, publishing and tourism. Execution at each stage depends on rights clearance, partner agreements, local regulation and operating conditions.

Stage	Role in Whitepaper	Business Link
EVENT	Develop performances, cultural events and special experiences as source IP	Experience & Access Utility
JOURNEY	Turn travel, interviews and field filming into content	EO Express / tourism preparation
LIVE / OTT	Expand audiences through live streaming, broadcast and global digital distribution	Global Content IP
DOCUMENTARY	Expand records of events and journeys into feature and follow-up content	Media & Data / Documentary
PUBLISHING	Books, photo books and digital archives as long-lived IP	Content & Intelligence
TOURISM	Expand into themed tourism and longer-term rail tourism linked to performance and content	Peace Tourism Belt

Six IP Portfolio Axes

EO Express is designed so that one event may expand across multiple business and IP axes, including OTT distribution, Online Live, Documentary, Publishing, Tourism and Sponsorship. These are not guaranteed revenue streams; each is an optional portfolio path that may be executed only after required rights, partner contracts and regulatory review are secured.

IP Axis	Public Whitepaper Treatment
OTT / Broadcast	Potential cooperation around global distribution and broadcast rights for performances or content
Online Live	Online performances and real-time digital audience expansion
Documentary	Long-term content based on performances, journeys and behind-the-scenes stories
Publishing	Books, photo books, digital records and archives
Tourism	Themed tourism connected to EO Express and the Peace Tourism Belt
Sponsorship	Potential event and content sponsorship with domestic and global brands

Gate-Based Execution

Actual EO Express execution proceeds only when prerequisite gates are satisfied, including official approval of the performance or cultural event, international-sanctions review, negotiations with artists and rights holders, content-distribution rights, and safety, insurance, entry/exit and transportation conditions. No specific artist or timing is presented in this whitepaper as a confirmed partner or schedule.

EO Token Connection

In the future, EO Token may be connected to EO Express special seating, event applications, limited programs, content access and tourism / experience services. Any such connection remains within the existing Experience & Access Utility principles, with actual conditions disclosed before the relevant event or service launch.

08

Content & Intelligence Utility

PUBLIC RELEASE · ENGLISH EDITION

B2B Intelligence Model

North Korea NOW and the regional database are intended to expand beyond free content into information products for companies and institutions. Basic information remains open, while in-depth reports and structured data may be monetized to support a sustainable data business.

Revenue Type	Description	Payment Principle
Report Sales	Single-sale standard reports	Fiat or EO
Subscription	Monthly / annual data and report subscriptions	Fiat or EO
EO Exclusive	Selected EO-only reports, data packs and early-access analysis	Direct EO payment
Custom Research	Customized regional and industry research for companies	Fiat
Consulting	Long-term assignments and institutional advisory	Fiat

Premium content and membership are excluded from the initial core utilities and are managed as future services (PLANNED). B2B Intelligence is expected to expand in Phase 3 as commercialization of North Korea NOW data progresses.

09

EO Token Utility Architecture

PUBLIC RELEASE · ENGLISH EDITION

Utility Architecture

Utility Pillar	Initial / Planned	Primary Use
Commerce	Core	Full EO payment in EO Shopping Mall
Experience & Access	Core	Special seating, audience access, event applications and limited experiences
Content & Intelligence	Phase 3 expansion	EO-exclusive reports and data packs
Promotional Reward	Promotion-limited	Rewards for selected events and campaigns
Membership	PLANNED	Structure to be defined later
Premium Content	PLANNED	Payment / access structure to be defined later
External Partner Utility	Expansion	Standard utility model at approved external partners

External Utility Expansion

The initial focus is on services inside the EO ecosystem. Once stability and a sufficient user base are established, EO may expand to approved external partners in performances, content, commerce, travel and tourism. External participation is expected to begin as an approval-based model, with a standardized open program considered in the longer term.

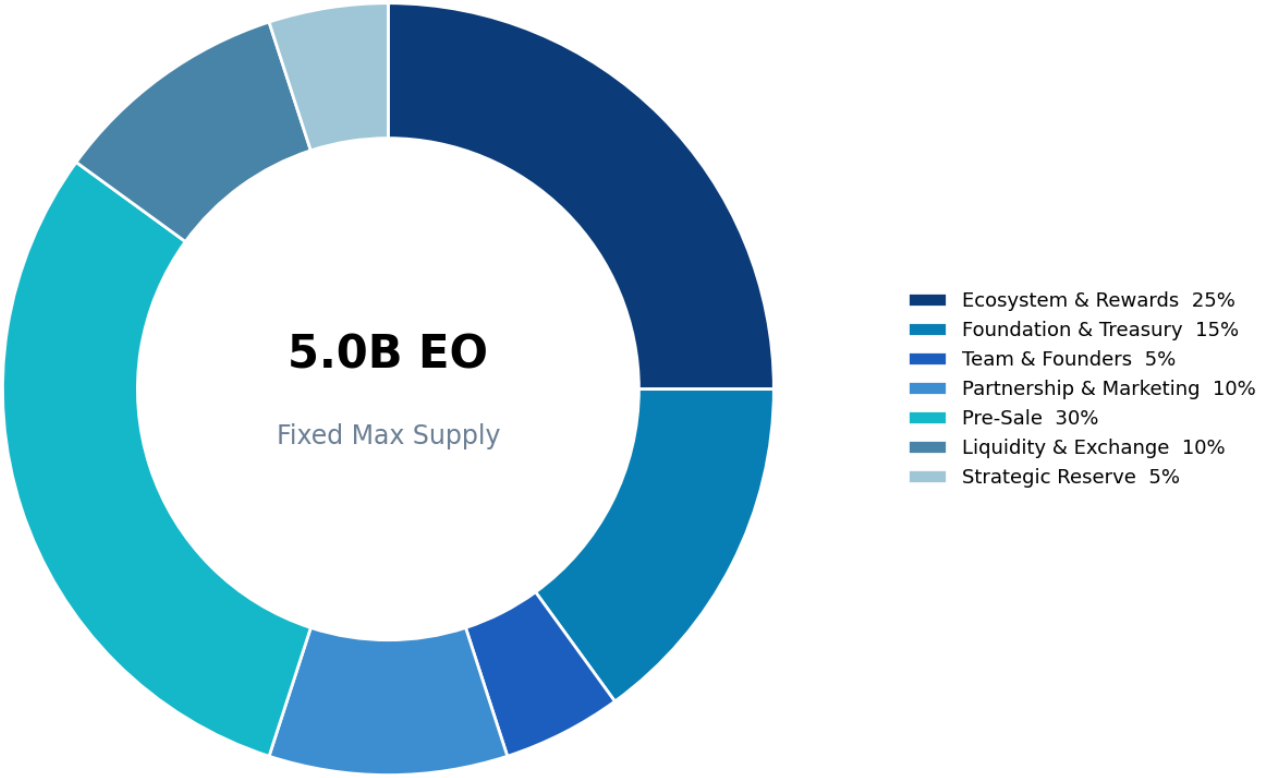

No Yield / No Dividend

EO Token does not operate a staking program and does not provide interest, dividends, profit sharing or other monetary rewards merely for holding the token. Its intended core value is formed through actual service use.

Token Economy

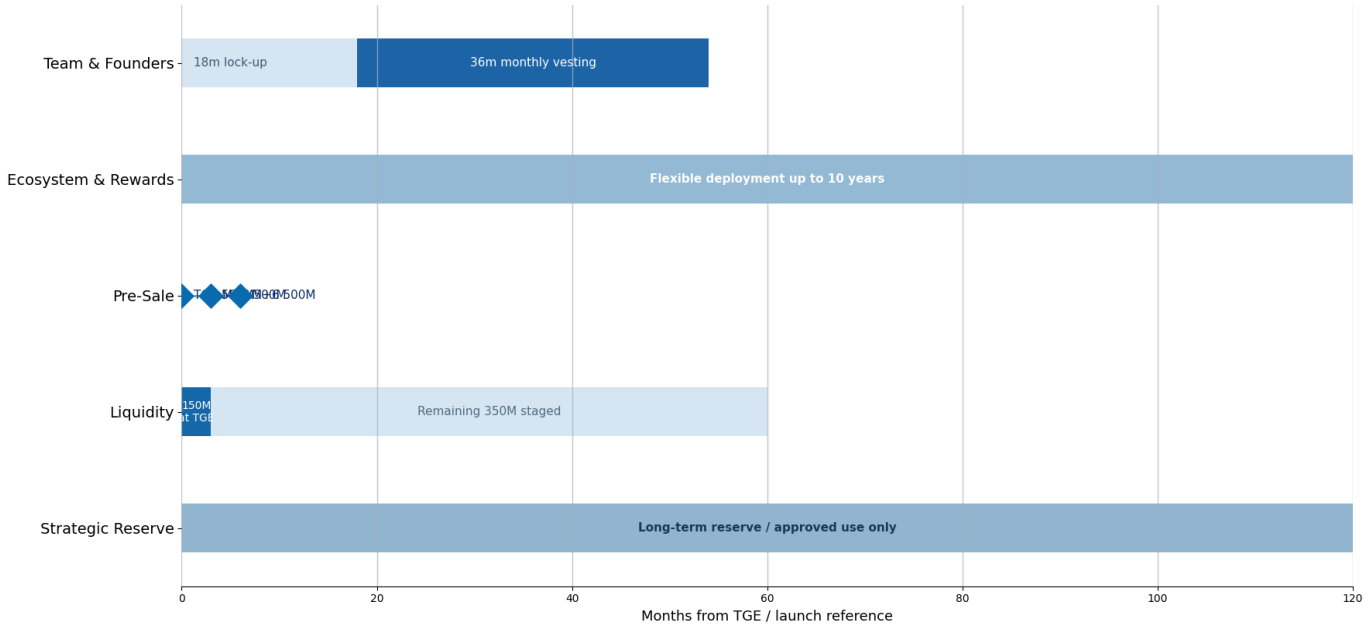

PUBLIC RELEASE · ENGLISH EDITION

EO Token has a fixed maximum supply of **5,000,000,000 EO**. After initial issuance, the Mint Authority and Freeze Authority are intended to be permanently revoked so that additional issuance and unilateral account freezing by the operator are not possible.

Allocation	Share	Amount
Ecosystem & Rewards	25%	1,250,000,000 EO
Foundation & Treasury	15%	750,000,000 EO
Team & Founders	5%	250,000,000 EO
Partnership & Marketing	10%	500,000,000 EO
Pre-Sale	30%	1,500,000,000 EO
Liquidity & Exchange	10%	500,000,000 EO
Strategic Reserve	5%	250,000,000 EO

Release & Vesting Principles

Allocation	Operating Principle
Team & Founders	18-month full lock-up followed by 36 months of equal monthly vesting
Ecosystem & Rewards	Flexible deployment over up to 10 years based on usage and business scale
Foundation & Treasury	No fixed lock-up; purpose-based deployment and quarterly disclosure of major uses
Partnership & Marketing	Individual vesting based on project / contract roles and performance conditions
Pre-Sale	1.5B EO allocated in total; three-stage distribution of 500M EO at TGE, 500M at TGE+3 months, and 500M at TGE+6 months
Liquidity & Exchange	150M EO of the 500M allocation supplied initially at TGE, with the remaining 350M introduced in stages
Strategic Reserve	Long-term holding in principle; limited deployment only after approval for material strategic needs

Initial Circulation & Burn

Initial Circulating Supply

650,000,000 EO · 13%
500,000,000 EO from the first Pre-Sale distribution (10% of total supply) + 150,000,000 EO of initial liquidity (3%). The full Pre-Sale allocation is 1,500,000,000 EO (30%); the remaining 1,000,000,000 EO is distributed in two stages of 500,000,000

EO at TGE+3 months and TGE+6 months. If actual sales are below the allocation ceiling, actual circulation may be lower than this reference amount.

Fixed Supply

- Maximum Supply: 5,000,000,000 EO
- Additional Minting: Not permitted
- Mint Authority: Permanently revoked after initial issuance
- Freeze Authority: Permanently revoked
- Decimals: 6

Burn Policy

The core Token Economy of EO Token is real-world utility rather than burning. EO recovered through ecosystem services may be partially burned, and Treasury-held EO may also be burned following an approval process if needed. A market Buyback & Burn program is not part of the current policy.

A recurring burn program is not intended to begin immediately after TGE. After sufficient real-use data has accumulated - including Shopping Mall payments, event usage and Treasury recovery - an implementation plan may be announced in advance, with the program potentially operating on a semiannual basis thereafter. No minimum supply floor is currently set.

Utility-Driven Value Framework

EO Token's economic value is not presented on the basis of a target price or promised investment return. The intended framework is one in which utility and users expand, real-use demand is formed, maximum supply remains fixed, and tokens recovered through the ecosystem may be recirculated through Treasury, used for operations or partially burned.

UTILITY GROWTH → TOKEN USAGE → ECOSYSTEM CIRCULATION → SUPPLY MANAGEMENT
This framework describes the relationship between real service use and long-term supply management, not a forecast of token-price appreciation.

Pre-Sale Summary

Thirty percent of total supply, or 1,500,000,000 EO, is allocated to the Pre-Sale. To support initial-circulation stability, the baseline distribution principle is a three-stage release: 500,000,000 EO at TGE, 500,000,000 EO at TGE+3 months and 500,000,000 EO at TGE+6 months. Detailed conditions, including sale price, sale period, USDT payment, KYC/AML and treatment of unsold allocation, are managed separately under Token Sale Terms.

EO Foundation, Treasury & Governance

PUBLIC RELEASE · ENGLISH EDITION

EO Foundation Structure

The baseline direction is to establish EO Foundation as an overseas nonprofit-type foundation before TGE. The Foundation is intended to oversee the EO Token ecosystem, Treasury, Tokenomics, ecosystem policy and Governance, with a role separated from EO Global's commercial activities.

Jurisdiction Selection

The jurisdiction will be selected through a combined assessment of digital-asset regulatory clarity, international credibility, compatibility with global exchanges and financial institutions, formation and operating costs, tax structure, and the practical operation of Treasury and Governance.

Board & Advisory

- Initial structure: a small board centered on founders and core operators.
- Legal, finance, blockchain, tax and business advisers may be added as needed.
- Holding EO Token itself does not confer Foundation decision-making, management or voting rights.
- Foundation-centered operation remains the long-term baseline; a DAO is not currently planned.

EO Foundation, Treasury & Governance

Routine Treasury execution may be performed by the operating team within approved policies and budgets. Transactions that may materially affect the ecosystem - including large asset movements, strategic investments, major partnerships and use of the Strategic Reserve - are subject to separate EO Foundation board approval.

Treasury Deployment Priority

- **1. Initial:** EO Wallet, token infrastructure, EO Shopping Mall, service integration, legal and operating systems.
- **2. Growth:** Content and data, utility expansion and external partnerships.
- **3. Expansion:** Global market entry and support for new businesses and services.

Transparency

- Principle of disclosing core wallet addresses related to Token Treasury and major supply / burn flows.
- Quarterly Treasury reporting.
- Category-level disclosure for technology, Shopping Mall, content, marketing, legal, rewards and other major uses.
- Separate notice for large transactions with material market or ecosystem impact.

Treasury EO conversions into fiat or stablecoins are limited to actual business-operating purposes. Conversions above a material threshold are subject to a separate approval procedure, with the specific threshold to be defined later in Governance policy.

Technology Architecture

PUBLIC RELEASE · ENGLISH EDITION

Component	Defined Direction
Blockchain	Solana
Token Standard	SPL Token
Token Supply	5.0B EO fixed · Mint/Freeze Authority revoked after issuance
EO Wallet	Web App · Non-Custodial · ACTIVE
Wallet Access	EO Wallet creation + compatibility with external Solana wallets
Commerce	Integrated with EO Shopping Mall as an independent service
On-chain	Payments, transfers, burns and Treasury flows processed on Solana

Architecture Flow
USER → EO WALLET → SOLANA / EO TOKEN → SHOPPING MALL · EVENT · INTELLIGENCE → TREASURY / ECOSYSTEM

Technical Paper Separation

The official whitepaper describes only the high-level technical architecture. Detailed implementation topics - including wallet creation and recovery, local key storage, payment verification, price quotes, refund reserves, operational wallets, incident response and Mainnet validation - are managed separately in the EO Technical Paper.

Deployment Principle

EO Token and EO Wallet are intended to undergo internal validation and staged deployment, with service stability verified in the Mainnet environment before broad release to general users. Test periods, deployment procedures and incident response are managed in the EO Technical Paper and internal operating policies.

Revenue & Funding

PUBLIC RELEASE · ENGLISH EDITION

Business revenue in the EO ecosystem is clearly separated from capital raised through the EO Token Pre-Sale. The Revenue Model focuses on income generated by actual services and business activities; sales forecasts, ROI, FDV and target prices are not presented in the official whitepaper.

Current / Mid-Term Revenue Source	Description
Advertising & Media	Broadcast and digital-content advertising, sponsorship and IP distribution
Content & Information Products	Reports, data packs and content licensing
EO Shopping Mall	Initial direct-sales revenue
B2B Intelligence	Single reports, subscriptions, customized research and consulting
Event & Experience	Revenue from performances, special seating, broadcast audience access and related services
Marketplace	Fees, promotions and other specifics to be separately defined later
EO Express IP — PLANNED / CONDITIONAL	Composite IP expansion across Live / OTT, documentary, publishing, tourism and sponsorship; revenue model to be defined only after relevant rights and partner contracts are secured

Funding vs Revenue

Funds raised through the EO Token Pre-Sale are treated as initial funding for building the EO ecosystem, not as business revenue. They may be used for platform and technology development, Shopping Mall implementation, content production, marketing and partnerships, legal and compliance work, and operations; Whitepaper v1.0 does not set fixed allocation percentages or a target fundraising amount by category.

14

Korean Peninsula Peace Tourism Belt

PUBLIC RELEASE · ENGLISH EDITION

STATUS
CONDITIONAL · Actual tourism projects proceed only if inter-Korean relations, government approvals, entry/exit rules, sanctions and licensing conditions are satisfied.

The Korean Peninsula Peace Tourism Belt is a long-term core concept that first accumulates tourism, cultural and ecological resources as content and data, then expands into tourism products, transportation, accommodation and events if institutional conditions permit.

VISION ROUTE
Seoul → DMZ → Kaesong → Pyongyang → Wonsan → Mt. Kumgang → Mt. Baekdu

The route above is a conceptual model for a long-term tourism belt, not a currently confirmed transportation or tourism route.

4-Stage Expansion Roadmap

- **1. Build tourism content and data** - Korean Peninsula 100 Tourism Assets.
- **2. Develop joint tourism products** - Actual products, reservation services and EO Utility integration.
- **3. Expand private investment and tourism infrastructure** - Accommodation, transportation, resorts and events.
- **4. Build the Korean Peninsula Tourism Belt** - A long-term network connecting major tourism hubs.

Korean Peninsula 100 Tourism Assets

The first stage of the Peace Tourism Belt is not infrastructure development but early construction of tourism content and data. The project aims to select 100 major tourism, cultural and ecological assets across both Koreas, systematically accumulate video, photography, historical, cultural and regional information, and study their potential for future tourism products.

Selection Framework

The intended model combines expert and public participation: tourism, history, culture, regional and North Korea specialists form an initial candidate pool, while selected input from Tongil TV viewers and the EO community may be incorporated.

Monetization Path

FREE CONTENT → PREMIUM DATA → B2B LICENSE → TOURISM PRODUCT
Basic content remains open, while deeper reports, data packs, video / photo licensing and future tourism products may provide additional monetization paths.

Although the Peace Tourism Belt as a whole is CONDITIONAL, preparation of content and data under the “Korean Peninsula 100 Tourism Assets” concept can be described as an advance-preparation area that may proceed earlier.

Rail, Hospitality & EO Utility

Rail & Sleeper Train

Rail and sleeper trains are emphasized as long-term transportation and experience elements of the Korean Peninsula Tourism Belt. The baseline model is not for the EO ecosystem to build or operate rail infrastructure directly; rather, EO aims to provide a tourism-product, content, reservation and Access Utility layer on infrastructure operated by governments, rail organizations and specialist operators.

Hospitality & Integrated Resort

Initially, the model is to work with specialist developers and hotel operators to connect tourism products, reservations, content and EO-exclusive benefits. In the longer term, project-level joint ventures or strategic equity participation may be considered only if commercial, legal and licensing conditions are satisfied. The public whitepaper describes this broadly as integrated tourism infrastructure combining accommodation, tourism and leisure rather than specifying unconfirmed facility types.

EO Utility in Tourism

- EO payment availability designated by product.
- Products supporting EO payment use either full EO payment or full fiat payment, not mixed payment.
- Selected premium or limited tourism products may operate as EO-exclusive offerings.
- Special schedules, seating, accommodation and experiences may connect to Experience & Access Utility.
- EO use remains limited during the early content stage and expands as actual tourism products become available.

Long-Term Expansion Portfolio

PUBLIC RELEASE · ENGLISH EDITION

Business Area	Status	Whitepaper Positioning
ESG & Humanitarian Cooperation	CONDITIONAL	Humanitarian cooperation involving medical, food, youth and family-support services
Smart Agriculture & Fisheries	CONDITIONAL	Technical cooperation in smart greenhouses, seeds, aquaculture, storage and processing
Korean Peninsula Peace Tourism Belt	CONDITIONAL	Tourism content → products → infrastructure → network
China Northeast Testbed	CONDITIONAL	Potential testbed and partnership-review hub in Shenyang and Northeast China
Future Settlement Infrastructure	R&D	Research into licensed settlement / stable-value structures separated from EO

ESG & Humanitarian Cooperation

Potential humanitarian services include public health and medical support, food and nutrition, children and youth support, and care, reunion, records, remembrance and counseling services for separated families. Global models combining pharmaceutical support with sustainable trade may be referenced as ESG expansion examples, but this whitepaper does not set specific donation or sales ratios.

Separated Families & Humanitarian Services — CONDITIONAL

Separated-family issues are approached as complex family and humanitarian matters involving confirmation of survival, correspondence, reunions, family reconnection, and legal or administrative counseling. Within that broader field, the EO ecosystem may review elements with strong humanitarian value and content / community relevance as conditional service frameworks.

Service Pillar	Public Whitepaper Scope	Key Preconditions
Reunion Support	Conceptual support for family connection, including confirmation of survival, contact and reunion opportunities	Inter-Korean exchange rules, privacy, entry/exit rules and government approval
Care & Hospice Support	Care and hospice-oriented support for elderly separated families and family meetings	Medical licensing, local law, guardian consent and sanctions review
Counseling & Community	Emotional counseling, family support and community care	Qualified professionals and protection of personal / medical information

Memory Archive	Oral histories, life stories, photographs, video and memory archives	Copyright, portrait rights and privacy consent
Memorial & Legacy	Non-financial legacy services related to remembrance, memory and family history	Burial / remains-transfer matters require separate legal and administrative review
Legal Referral	Potential lawful counseling and professional referral for inheritance, property and family-relationship matters	EO does not intermediate remittances, inheritance transfers or investments

Third-Country Pilot Concept

Shenyang, Dandong and other parts of Northeast China may be considered among candidate locations for third-country family support, care and reunion assistance. No single region is assumed to be the only alternative; a Northeast Asia humanitarian pilot would be considered only where legal, medical, immigration, sanctions and partner conditions are satisfied.

Excluded Commercial Mechanics

Specific monthly fees, hospice-profit estimates, contingency fees on inheritance, large inheritance or investment effects, remittance structures, and profit-sharing arrangements related to burial services are not adopted as execution models or revenue forecasts in the public whitepaper. Such elements cannot be treated as commercialization assumptions without legal, sanctions, foreign-exchange, medical and funeral-services review.

Smart Agriculture, Testbed & Global Content

Smart Agriculture & Fisheries — CONDITIONAL

Potential technical cooperation areas include smart greenhouses, seeds and seedlings, agricultural water, storage and distribution, aquaculture, feed, water-quality management, cold-chain systems and processing of agricultural and fishery products. The initial focus is on related content, data, B2B intelligence and study of small-scale pilot possibilities rather than immediate large-scale development.

China Northeast Testbed — CONDITIONAL

The possibility of using Northeast China and the Shenyang area as a testbed and partnership-review hub for Korean Peninsula-related commerce, tourism and B2B businesses remains a subordinate strategy within Long-Term Expansion. Any such work is subject to advance review of labor, sanctions, foreign exchange, customs, tax and corporate law.

Inter-Korean Cooperation Education & Advisory — CONDITIONAL

Education, research and consulting concepts in Northeast Asia, including Shenyang, are limited to business and institutional models involving Korean Peninsula economic, industrial and regulatory information, expert education and B2B networking. Direct investment arrangement or brokerage of transactions with North Korea is not included in the confirmed business scope of this whitepaper.

- Practical education programs and seminars on Korean Peninsula economy and industry.
- Market, policy and legal research related to Northeast China and the Korean Peninsula.
- Lawful information exchange and partner networking among companies, experts and institutions.
- Actual investment, transaction or joint-venture structures are not executed without separate legal review and approval.

Global Humanitarian Documentary IP — PLANNED

The project may explore expansion into global documentary and premium content IP based on Korean Peninsula history, humanitarian issues and peace. No specific OTT investment, production budget, exclusive reporting rights or MOU is presented as confirmed; the concept is reflected only as the potential development of humanitarian content IP with broad international resonance.

Future Settlement Infrastructure — R&D

EO Token is intended to remain a utility token for commerce, content, Experience and information services. Financial infrastructure for long-term inter-Korean economic cooperation, B2B transactions, tourism and service settlement is researched separately from EO Token as a distinct licensed payment / settlement structure.

- Research into a separate stable token or other licensed digital-asset model.
- Review of potential cooperation with financial institutions, governments, regulators and payment providers.
- Review of foreign exchange, payments, KYC/AML, sanctions, tax and corporate structure.
- Only long-term research into possible service integration between EO Token and a separate settlement asset.
- Reserve, collateral, issuing jurisdiction and settlement mechanics are not determined at this stage.

Policy Alignment

PUBLIC RELEASE · ENGLISH EDITION

Some mid- and long-term EO ecosystem concepts may intersect with policy directions considered or pursued by governments in areas such as peaceful exchange, public-health cooperation, peaceful use of the DMZ, peace and unification education, and broader use of North Korea-related materials. Such policy intersections do not mean that the EO project has government approval, support, guarantees or a confirmed joint project.

Policy Environment Reference	Potential EO Ecosystem Intersection
Support for peaceful and private-sector exchange	Reference environment for culture / education, humanitarian cooperation and long-term tourism / cooperation projects
Public-health cooperation	Long-term reference for ESG & Humanitarian Cooperation
Peaceful use of the DMZ, rail and border regions	Reference environment for the Korean Peninsula Peace Tourism Belt
Peace, unification and civic education	Potential public / education-market intersection for culture and education content
Access to North Korea-related materials and digital archives	Reference direction for North Korea NOW data and content infrastructure

At the time any project is actually pursued, applicable laws, budgets, approvals, sanctions and the then-current policy environment must be reviewed again. The existence of policy materials does not guarantee project feasibility or profitability.

Roadmap

PUBLIC RELEASE · ENGLISH EDITION

Roadmap Overview

Phase	Timing / Condition	Core Objective
Phase 1	0-6 months	Foundation & Legal Infrastructure
Phase 2	6-12 months	Token Launch & Utility Preparation
Phase 3	12-24 months	Commerce, Experience & Data Expansion
Phase 4	24 months onward	Marketplace & Global Expansion
Phase 5	Entry when conditions are satisfied	Conditional Cooperation Expansion
Phase 6	Long-term research	Future Settlement Infrastructure R&D

Phase 1-3 Milestones

Phase 1 — Foundation & Legal Infrastructure / 0-6 months

- Complete legal establishment of EO Foundation.
- Complete core review of EO Token issuance, Pre-Sale, KYC/AML, Wallet, Shopping Mall payment, Treasury, tax and accounting.
- Bring Tokenomics, issuance structure, Pre-Sale, technology and operations to a TGE-ready level.

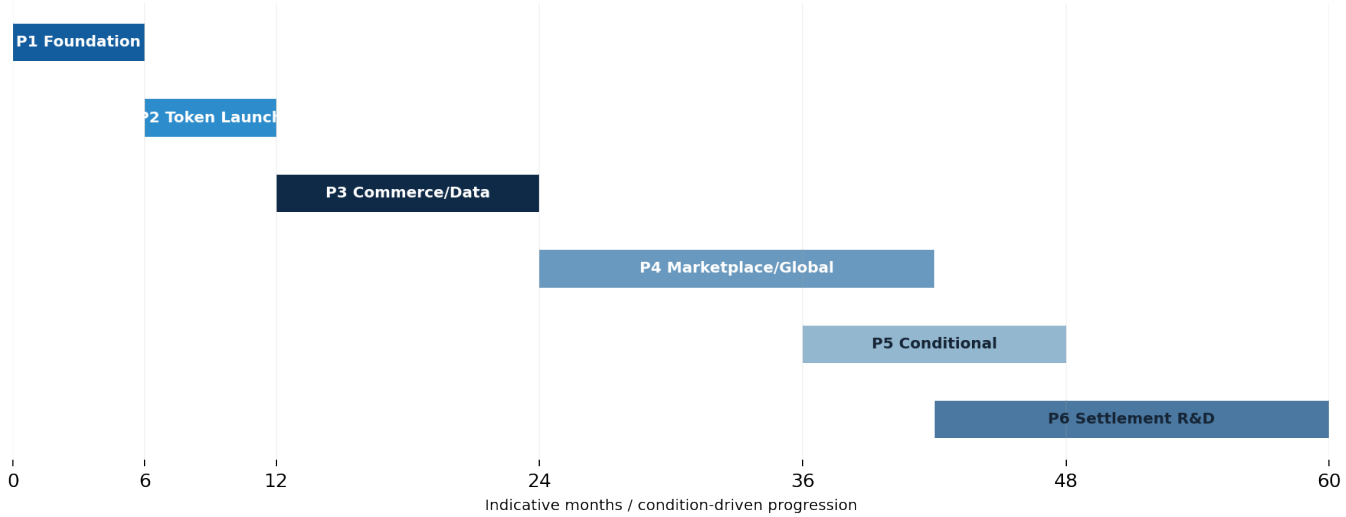

Phase 2 — Token Launch & Utility Preparation / 6-12 months

- Complete EO Token TGE and begin Pre-Sale allocation distribution.
- Publicly release the Solana-based non-custodial EO Wallet web app.
- Complete preparation for initial liquidity, exchange-listing readiness, EO Shopping Mall and Experience Utility integration.

Phase 3 — Commerce, Experience & Data Expansion / 12-24 months

- Officially launch EO Shopping Mall and commercialize full EO payment.

- Secure real operating cases for Experience & Access Utility.
- Commercialize North Korea NOW-based B2B reports, subscription intelligence services and selected EO-exclusive data products.

Phase 4-6 Milestones

Phase 4 — Marketplace & Global Expansion / 24 months onward

- Operate a combined direct-sales + Marketplace model.
- Secure real EO use cases with external performance, content and commerce partners outside the core EO ecosystem.
- Operate an EO-related service or partnership in at least one market outside Korea.

Phase 5 — Conditional Cooperation Expansion / When Conditions Are Satisfied

- Complete legal, regulatory and sanctions review for at least one conditional business field.
- Secure an executable structure with actual partners such as governments, specialist institutions, companies, NGOs or travel agencies.
- Begin a pilot or commercialization effort in at least one conditional project.

Phase 6 — Future Settlement Infrastructure / R&D

- Complete institutional and regulatory review of foreign exchange, payments, digital assets, stable-value assets, KYC/AML and sanctions.
- Review potential cooperation with financial institutions, payment providers, governments, regulators, legal advisers and technology partners.

- Complete a conceptual model or PoC design for licensed settlement / payment infrastructure separated from EO.

Compliance & Risk

PUBLIC RELEASE · ENGLISH EDITION

Utility Token Design Intent

EO Token is designed as a utility token for service use, payments, Experience & Access Utility and information-product purchases within the EO ecosystem. It is not intended to provide company equity, dividend rights, interest income, principal protection or a specific investment return.

Final legal classification and regulatory treatment may differ depending on the countries of sale and distribution, service structure and applicable laws of the relevant jurisdiction. Final determinations will be made only after required legal and regulatory review before issuance, sale, listing and service operation.

Risk-Based KYC / AML

Rather than applying KYC uniformly to every token holder, the EO ecosystem adopts a risk-based direction in which KYC/AML is applied to the Pre-Sale, fiat-linked services, selected regulated services and transactions where required by law. Users located in sanctioned or restricted jurisdictions, sanctioned individuals or entities, and users for whom service is legally restricted may be excluded from the Pre-Sale and selected official services.

Business & Regulatory Risk Matrix

Risk Area	Whitepaper Management Principle	Level
Digital-asset / legal classification	State utility-design intent + final classification under applicable jurisdiction law	High
Pre-Sale / KYC/AML	Separate Token Sale Terms + risk-based KYC/AML	High
Sanctions / foreign exchange	All North Korea-related businesses conditional and subject to separate legal review	High
Tourism / entry & exit	CONDITIONAL + government approval, safety and licensing prerequisites	High
Food / customs / inspection	Product-specific customs, origin and inspection requirements	Medium-High
Medical / humanitarian cooperation	Local medical, donation, import/export, sanctions and partner-qualification review	High
Agriculture / fisheries	Inter-Korean exchange, export control, investment and foreign-exchange review	High

Market / liquidity	Disclosure of price, volume, liquidity volatility and listing uncertainty	High
Technology / security	Disclosure of non-custodial responsibility and network / service interruption risk	Medium-High
Separated-family / family services	Review of medical, privacy, immigration, inheritance, FX, sanctions and funeral regulations; public whitepaper focuses on non-financial counseling, care, records and remembrance	High

Change Policy

Legal and regulatory review before TGE may lead to changes in the current Pre-Sale method, KYC/AML, Foundation structure, selected Utilities and Tokenomics. Material changes to Tokenomics, Foundation, Roadmap or Compliance are managed through a new whitepaper version, while minor changes may be handled through official notices.

Conditional Expansion Compliance

Long-term North Korea-related visions are explained while clearly marking each area as CONDITIONAL or R&D. Before actual entry into any such business, project-specific legal, regulatory, sanctions and licensing review is performed again.

Public Disclosure Boundaries

- North Korea-related movement of personnel, employment or settlement structures are not treated as executable models until applicable legal, sanctions and approval reviews are complete.
- Inheritance, remittance and profit-distribution structures are not presented as official business models; related areas are described primarily through non-financial counseling and information services.
- Tourism infrastructure assumes lawful tourism, accommodation and cultural facilities within applicable law and licensing; unconfirmed facility types are not presented as confirmed projects.
- OTT platforms, government agencies or partners are not named as official partners or official linkages unless an MOU, contract or other relationship has been objectively verified.
- Financial projections that could encourage investment decisions - including business-revenue forecasts, FDV, ROI or target price - are excluded from the official whitepaper.
- Specific artists, rights holders, performance dates, regions, routes or MOUs related to EO Express are not presented as confirmed partners or schedules before official agreement.
- Specific costs, success fees, large investment effects, remittances or funeral-related profit sharing in humanitarian and family-support projects are excluded from public-whitepaper financial forecasts and execution promises.

Partner Disclosure

Only partners with objectively verifiable relationships such as contracts, MOUs or formal agreements are disclosed by name. Organizations at the proposal, discussion or contact stage are not presented as official partners.

Team & Partners

PUBLIC RELEASE · ENGLISH EDITION

Core operators and advisers of EO Foundation, EO Global and Tongil TV are disclosed through official channels only to the extent that their roles, experience and responsibilities have been fact-checked and they have consented to public disclosure. Individuals not named in this whitepaper should not be regarded as officially disclosed.

Partner Disclosure Principle

Only partners with objectively verifiable contracts, MOUs or formal agreements are named. Institutions at the discussion or proposal stage are not presented as official partners.

PUBLIC DISCLOSURE STATUS
EO Foundation jurisdiction, named team profiles, official partner lists, Token Sale Terms and Legal Notice will be separately disclosed through official channels once fact verification and required legal / regulatory review are complete. Unconfirmed institutions, individuals and terms are not treated as confirmed facts in this whitepaper.

Disclaimer Summary

PUBLIC RELEASE · ENGLISH EDITION

EO Token is designed as a utility token for use within the EO ecosystem and does not promise investment returns, price appreciation, dividends, principal protection or any specific financial return.

The business plans, Roadmap and long-term vision described in this whitepaper reflect current planning and objectives. Actual execution and timing may change, be delayed or be discontinued depending on technology development, market conditions, partnerships, applicable law, regulation, sanctions concerning North Korea, government approval, entry and exit requirements, foreign-exchange rules and project-specific licenses.

EO Token's final legal classification, Pre-Sale conditions, KYC/AML, Foundation structure and exchange-listing policies may be adjusted based on legal review in the applicable jurisdictions. If a Pre-Sale is launched, detailed legal notices, risk factors, user-eligibility criteria and sale conditions will be provided before the sale through separate Legal Notice and Token Sale Terms.

This whitepaper is not an investment solicitation, securities registration statement, guarantee of returns or evidence of government or institutional approval. Any person considering the use of EO Token or related services should independently review the legal, tax and financial implications applicable to them.

APPENDIX A

Project Status Framework

PUBLIC RELEASE · ENGLISH EDITION

Label	Meaning	Primary Projects
ACTIVE	Development or operation is currently underway	EO Wallet
PLANNED	Business structure has been defined and preparation is underway	North Korea NOW, EO Shopping Mall, culture / education content, global content IP, EO Express composite Experience IP platform
CONDITIONAL	Execution only if policy, sanctions, licensing and other conditions are satisfied	ESG / humanitarian cooperation, smart agriculture and fisheries, Peace Tourism Belt, Northeast China testbed, separated-family and humanitarian services
R&D	Institutional, technology and partner models under long-term research	Future Settlement Infrastructure

Whitepaper Versioning

Material changes to Tokenomics, the EO Foundation structure, core Utility, Roadmap or Compliance framework are managed through new versions such as v1.1, v1.2 or v2.0. Minor changes involving links, wording or detailed operating policy may be handled through official notices.

This document is the Public Release of EO Token Whitepaper v1.0. It is not a legal opinion or investment solicitation. If material changes occur, a new version will be announced. If a Pre-Sale begins, the latest publicly released whitepaper, Legal Notice and Token Sale Terms available at that time will apply together.

APPENDIX B

Source & Reference Notes

PUBLIC RELEASE · ENGLISH EDITION

Reference Category	Public Whitepaper Treatment
Project strategy and brand materials	Used as a basis for EO Token brand philosophy, ecosystem roles, long-term business portfolio and disclosure boundaries
Media, data and content planning	Used to structure North Korea NOW, culture / education, content-and-data-first strategy and information-product models
Commerce and payment planning	Used to structure EO Shopping Mall products, payment and supply-chain models. Exclusive rights or direct-import rights are not presented as confirmed until objectively secured.
ESG and humanitarian planning	Used for conditional humanitarian frameworks involving medical support, family support, care, memory and remembrance. Fees, success fees, investment, remittance and profit-sharing are excluded from public execution commitments.
Global content IP planning	Used for content-IP expansion across documentary, live, publishing and sponsorship. Specific platforms, budgets, MOUs or ROI are not presented as confirmed before official agreement.
Public policy and regulatory materials	Used to understand policy environments for peaceful exchange, healthcare, DMZ, education and information use. This does not imply government approval, support or official linkage to EO projects.
Family support and regional-cooperation planning	Used for separated-family support, hospice / care, counseling, memory / remembrance and Northeast Asia pilot, education and research models. Execution is not confirmed before legal, sanctions, immigration, medical and FX review.
Experience IP planning	Used for the One Event → One Journey → One Global IP structure and the combination of Event / Journey / Live / Documentary / Publishing / Tourism. Specific artists, rights holders, dates, routes, MOUs or contracts are not presented as confirmed before official agreement.

Reference Integrity Note
This whitepaper has been reconstructed for public release based on internal business-planning materials and public policy / regulatory materials. Proposals, estimates, possibilities under discussion and planning objectives are not to be interpreted as official government, institutional, platform or partner approval, contracts or support. Named partners and specific execution conditions will be separately disclosed only after objective verification and required legal / regulatory review.

EO Token · One Future, Forever Connected
